Zhendong (Enoch) Yin

Washington, DC | enoch.yin@gwmail.gwu.edu | Personal Website | GitHub

Education

The George Washington University *Jan 2026 – May 2027 (expected)*
M.S. in Statistics Washington, DC

- GPA: 4.0/4.0. Selected coursework: Probability, Mathematical Statistics, Bayesian Statistics, Deep Learning, and Time Series Analysis.

Hong Kong University of Science and Technology (HKUST) *Sep 2017 – Jun 2021*
B.Sc. in Mathematics (Statistics and Financial Track); Minor in Business Hong Kong

- Second Class Honors, Division I. Selected coursework: Stochastic Processes, Numerical Analysis, Linear Algebra, ODE/PDE, Mathematical Finance, and Quantitative Risk Management.

Honors and Fellowships

Graduate Instructional Assistantship *Fall 2026*
Department of Statistics, The George Washington University.

Johanna M. Peters Endowed Graduate Fellowship *2026 – 2027*
Department of Statistics, The George Washington University.

Dean's Award *2026 – 2027*
Columbian College of Arts and Sciences, The George Washington University.

Research Interests

Large language models (LLMs); self-evolving and adaptive AI systems; reliable and efficient machine learning; statistical machine learning; sequential inference; change-point detection; time-series analysis.

Publications and Manuscripts

Enoch Yin, Bin Liu, and Zhengling Qi. "When Is Enough Enough in Self-Evolving LLM Systems?" 2026. *arXiv:2610.04756. Under review at ICLR 2027.*

Korel Gundem, Juncheng Dong, **Enoch Yin**, Dennis Zhang, Vahid Tarokh, and Zhengling Qi. "Boosting In-Context Learning in LLMs Through the Lens of Classical Supervised Learning." 2026. *Submitted to ACL Rolling Review (October 2026).*

Research Experience

Stopping and Output Selection for Self-Evolving LLM Systems *May 2026 – Present*
The George Washington University; advisor: Prof. Zhengling Qi Washington, DC

- Formulated stopping and output selection in self-evolving LLM systems as online sequential testing and change-point estimation using paired per-item outcomes.
- Developed a plug-and-play, anytime-valid procedure that controls false alarms without modifying the underlying evolution algorithm; evaluated it on SkillOpt and GEPA across three model families and five benchmarks.
- Reduced token use by 48.4–91.6% on the three main benchmarks while retaining comparable unseen-test performance; on SearchQA, stopped at round 4 of 40 and saved 91.6% of tokens with a +0.43 percentage-point accuracy difference relative to the full run.

Empirical Asset Pricing in Foreign-Exchange Markets via Machine Learning *May 2024 – April 2025*
Research project, HKUST; collaborator: Prof. Xuhu Wan Remote

- Study return predictability and pricing anomalies across six major currency markets using macroeconomic

indicators, interest-rate differentials, and technical signals.

- Build LSTM models for cross-market spillovers and multi-horizon return forecasts; evaluate momentum, carry, and factor-based portfolio strategies against benchmarks.

Chinese Social Media Opinion Analysis *Sep 2023 – Aug 2024*

Research assistant project, Department of ISOM, HKUST / HKU Economics Hong Kong

- Built an NLP pipeline for thousands of Chinese Weibo posts, combining text preprocessing, LDA topic modeling, sentiment scoring, and high-dimensional clustering to characterize opinion trends.

Teaching Experience

Graduate Instructional Assistant (GIA) *Fall 2026*

Department of Statistics, The George Washington University Washington, DC

- Teaching assistant for STAT 2118 (Regression Analysis).

Teaching Associate, Department of ISOM, HKUST *Jul 2021 – Aug 2024*

Statistics and analytics courses at undergraduate and graduate levels Hong Kong

- Led weekly tutorials, prepared course materials and exams, and graded assignments and examinations for six statistics and analytics courses.
- Coordinated ISOM 2600 (Introduction to Business Analytics; 400+ students), including TA-team management, tutorial design, grading, and exam administration; mentored teams in portfolio-optimization competitions.

Selected Projects and Awards

Champion, GWU Chest X-Ray Multilabel Classification Competition *Spring 2026*

- Ranked first among competing teams; fine-tuned DenseNet-121 on NIH ChestX-ray14 using custom losses, threshold optimization, and data augmentation.

DermAI: Skin Cancer Risk Classification System *Spring 2026*

- Built a leakage-resistant 10-class classifier from HAM10000, ISIC 2020, and Kaggle data; compared ViT and EfficientNet-B3, achieving 76% accuracy, 0.668 macro-F1, and 81% high-risk recall.
- Designed a clinically motivated risk score and ROC-based thresholds; deployed an interactive demo with attention visualization.

Time-Series Analysis and Portfolio Optimization *Dec 2020 – Jun 2021*

Undergraduate capstone, HKUST; supervised by Dr. Chi Man Leung Hong Kong

- Fit ARMA, ARIMA, ARCH, and GARCH models to Hang Seng Index constituents; constructed and backtested MVP, GMVP, and MSRP portfolios on 2011–2021 data.

Additional Experience

Investment Analyst Intern, Chartwell Capital *Jun 2020 – Sep 2020*

Private hedge fund Hong Kong

- Researched Hong Kong-listed internet, insurance, and real estate companies; built DCF models to assess valuations and investment risks.

Technical Skills

Programming: Python (PyTorch, TensorFlow, NumPy, pandas, scikit-learn), R, SAS, LaTeX.
Methods: Sequential inference, change-point detection, transformers, CNNs, NLP, time-series modeling, Bayesian inference, high-dimensional statistics.
Tools: Git, Docker, AWS EC2, Hugging Face, Streamlit.
Languages: English (proficient), Mandarin (native), Cantonese (proficient).
